

BULLET-ID THE PROCESS

1. PATENTED BARCODE TECHNOLOGY

A unique number is laser etched on every round of factory-produced ammunition making it easily identifiable.

2. POINT OF SALE IDENTIFICATION

The purchaser's identity and etched number are linked and are securely maintained to identify individual ammunition purchases.

3. CRIME SCENE INVESTIGATION

The Bullet-ID technology provides a method for law enforcement personnel to link spent cartridge cases to the initial purchaser.

4. SMARTPHONE APP

Within 10 seconds, the investigating officer can correlate the spent case to its purchaser directly with their smartphone.

5. DURABLE CODES

The permanent code is identifiable when as little as 25% of the code etched on the case is recoverable, which can lead to more arrests. Bullet-ID technology is the modern crime fighting tool.
